

Presentation to TDB, 1 December 1965

STATINTL

Sine-Wave Testing Equipment, [REDACTED]

- 1) Review history of instrument briefly:
 - a) purpose
 - b) technique
 - c) targets (to be procured and furnished as GFE) *2 KINDS*
 - d) CPIFF, based on frequency performance.
- 2) Review present proposal
 - a) Technique: proposed previously unsuitable, because of problem in viewer's object plane. Present method variation of original version.
 - b) Recommendation that we go both ways - good for viewer analysis, good for precise laboratory work.
 - c) Targets: our original estimate was too low, [REDACTED] would require modification of equipment to lay down proper targets.
